Hilt — implemented MongoDB schema
Current checkout · 9 November 2026

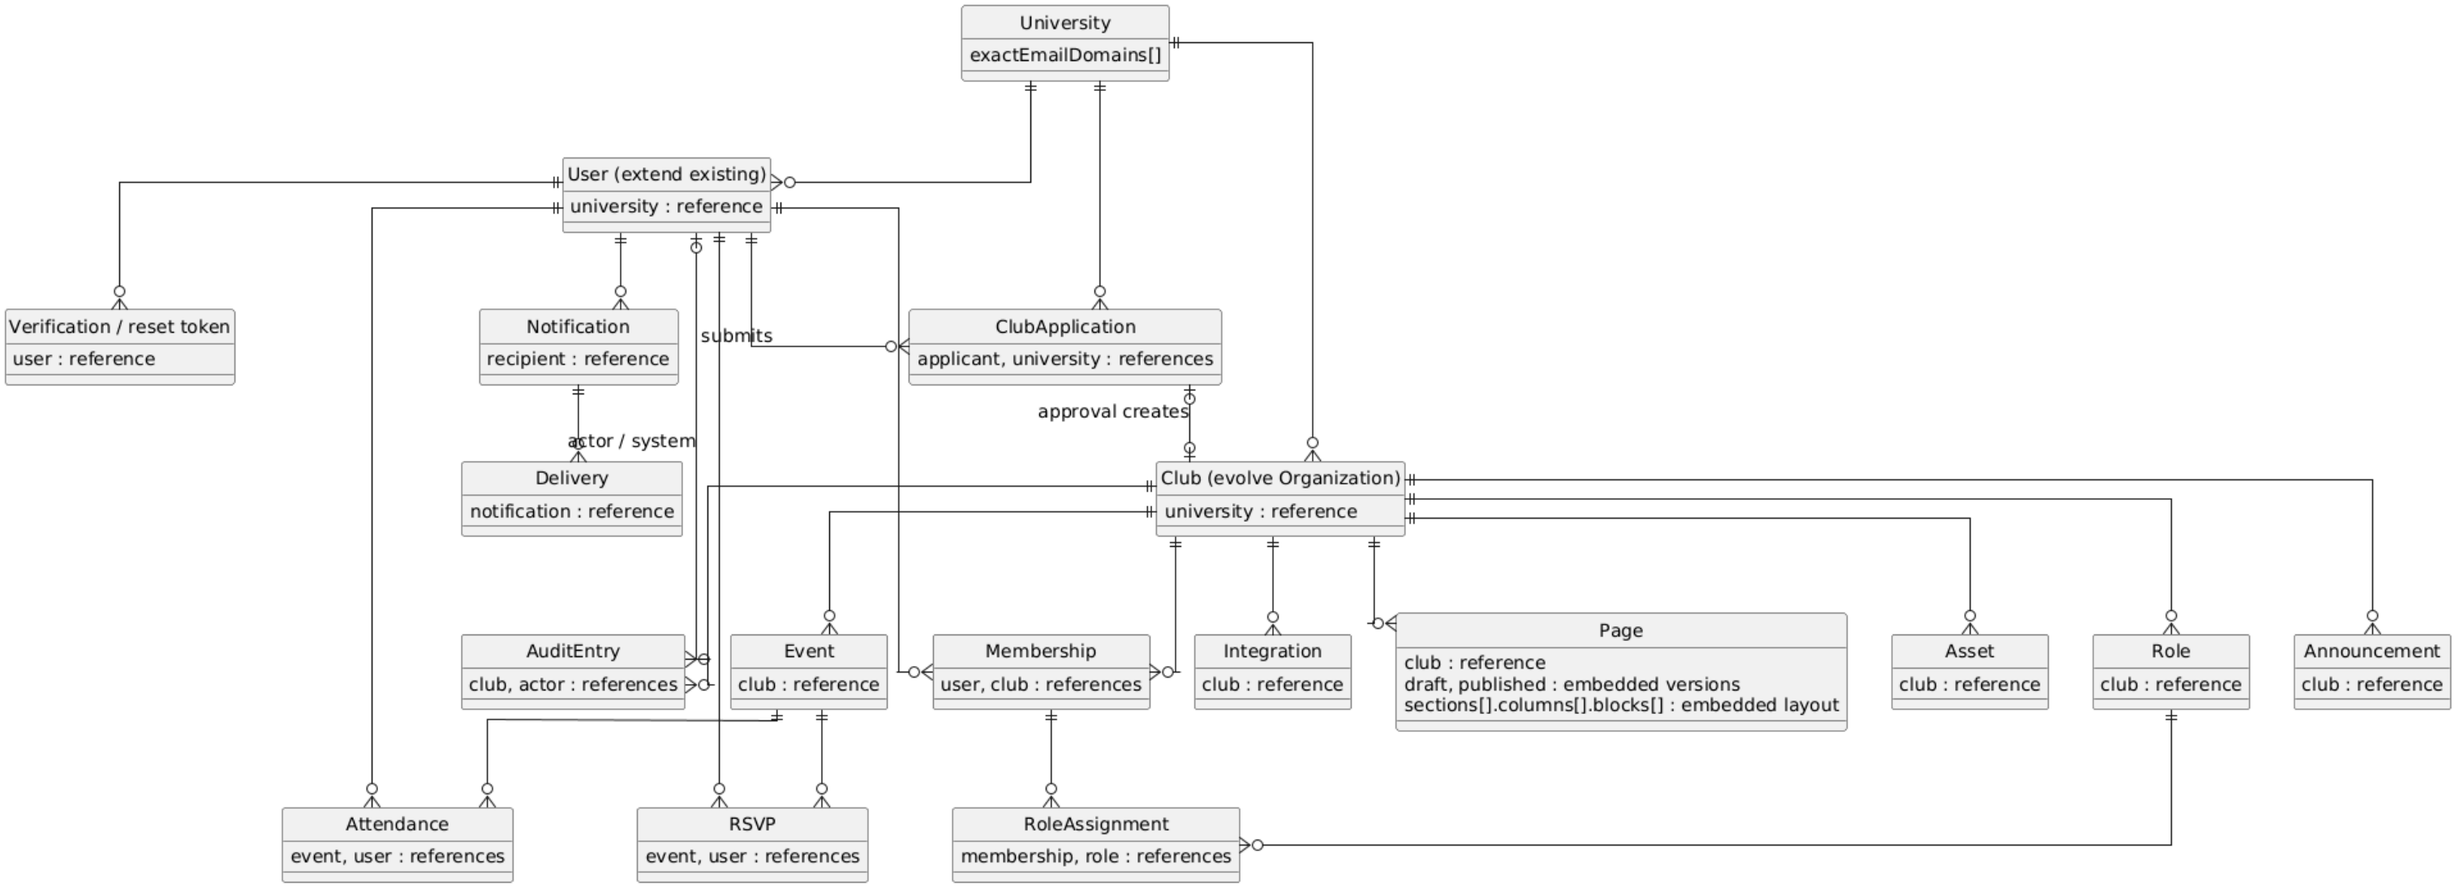

Hilt — evidence and delivery forecast
Status: 9 November 2026 · future dates are estimates, not team commitments

Green: dated repository / prior demo evidence. Blue: current local work. Purple: check-in.
Orange: proposed calendar windows. No recorded hours or inferred historical durations.
Course date and future owners require team confirmation; the course schedule is currently blank.
Forecast assumes parallel work across the team, reduced holiday capacity, and an agreed course subset.
Full PRD remains scheduled after the course demo; payment processing is stretch and excluded.

Hilt — proposed PRD data relationships
PLANNED · not the implemented database schema

Proposed logical relationships from docs/prd.md; fields and indexes remain to be designed.
References use IDs; only Page layout/version content is proposed as embedded here.
Membership, RSVP, and Attendance remain independent records.
Event blocks reference Event; using a block never duplicates RSVP/Attendance.
Audits must retain recoverable prior state; delivery history survives recovery.
Not a migration or a claim that these collections or APIs exist.
